

RESPONSIVE WEB DESIGN

Desktop

Tablet

Phone

Responsive web design makes your web page look good on all devices.
RWD is not a separate technology.

**LAYOUT
FLEXIBLE & MODERN**

Flexible Grids + Media Queries

(`'px'` to `'%'` or `'em'`, `'float'`)

Flexible Layout Design

Flexbox, Grid, Multiple-column

Modern Layout Techniques

VIEWPORT

```
<!DOCTYPE html>
<html lang="en">
  <head>
    ...
    <meta name="viewport" content="width=device-width, initial-scale=1">
    ...
  </head>
  ...
```

The viewport is the user's visible area of a web page.

VIEWPORT UNIT

`vw, vh, vmin, vmax`

Viewport width / height / minimum / maximum

RESPONSIVE IMAGES

```
<!DOCTYPE html>
<html lang="en">
  <head>...</head>
  <style>
    img {
      width: 100%;
      height: auto;
    }
  </style>
  ...
```

If the width property is set to a percentage and the height is set to "auto", the image will be responsive and scale up and down.

RESPONSIVE TYPOGRAPHY

```
html {  
  font-size: 1em;  
}  
h1 {  
  font-size: 2rem; /* font-size: 6vw; */  
  /* font-size: calc(1.5rem + 3vw); */  
}  
@media (min-width: 1200px) {  
  h1 {  
    font-size: 4rem;  
  }  
}
```

Text is always related to the size of the viewport.

There you should never set text using viewport units alone and it involves using `calc()`.

min font size

min screen size

font-size: calc(16px + (24 - 16) * (100vw - 400px) / (800 - 400));

max font size - min font size

max screen size - min screen size

Responsive & Fluid Typography with vh & vw units
